

Integration Solutions made Easy

# InterWeave Smart Solutions

## CLouDCONNECT<sup>®</sup>

**CloudConnect<sup>®</sup>** integrates any application, process, gateway, protocol, partner > customer < in the world. **CloudConnect<sup>®</sup>** connects your world.

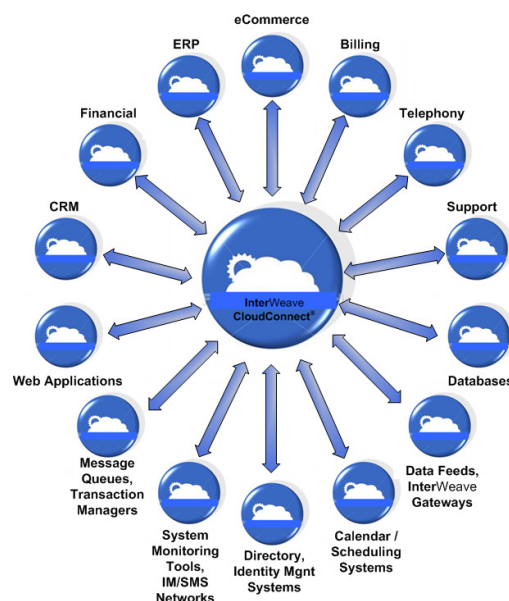

### Introducing InterWeave CloudConnect<sup>®</sup>

**CloudConnect<sup>®</sup>** is the result of three years of focused execution, development and deployment; porting the **InterWeave** Integration Platform to the SaaS world. The strength, flexibility and robustness of the **InterWeave** Integration Platform; the engine that powered Fortune 100 companies integration needs, is now available as **CloudConnect<sup>®</sup>**; **lightweight, flexible, hosted**. The premier Solutions Portal for all your integration needs.

**CloudConnect<sup>®</sup>** was designed to meet the complex integration needs our customers face; integrating their new or existing applications; taking advantage of SaaS economics and flexibility but demanding the highest levels of data security and privacy. This is the charter we set out to fulfill - and this is what **CloudConnect<sup>®</sup>** is; but its even more.

**CloudConnect<sup>®</sup>** is the first multi-tenant, SaaS, data integration, Solutions platform hosted at Rackspace Managed Hosting. Rackspace is a Sarbanes/Oxley, SaaS 70, Salesforce & Symantec certified managed services vendor. Its in this environment that **CloudConnect<sup>®</sup>** is running with the following attributes:

- Multi-tenant Solutions platform
- Primary/secondary servers automatically generated
- Full heart-beat-synchronization between primary/secondary servers
- Automatic failover on primary/secondary servers
- Automated rollback — but there is more.

When you generate your Solution, a second application which monitors and manages Data and Connection in real time is generated; the **Integration Manager**.

The **Integration Manager** is accessed when you log into the **InterWeave Smart Solutions** Portal. The console is a customer facing User Interface that controls the multi-tenant platform and your Solution.

- Shows only the transactions you are authorized to see
- Allows complete control of scheduled and utility transactions
- Provides repetition protection
- Provide automatic synchronization with error reporting on-demand
- Automatically invoke multiple threads based on load requirements

It is the combination of the attributes of the multi-tenant Solutions platform and the **Integration Manager** that provides **CloudConnect<sup>®</sup>** customers, technology partners and system integration consulting partners the ability to rapidly configure and deliver **Smart Solutions** that provide secure, affordable, cloud-based integration.
